/clone="FCR was performed on Arabidopsis thaliana lines each of which contains one or more TDNA insertion elements. The resultant fragment for each line was directly sequenced to determine the genomic sequence at the site of insertion. Details of the protocols used can be found at http://signal.salk.edu/tdna_protocols.html"

The library was constructed by Claire Murphy and Dr. James McCarter at Washington University, St. Louis. Oligo(dT)-SL1 PCR based library. Embryo coDA PCR products of size >400 mucleotides containing SL1 on the 5' end and oligo(dT) on the 3' end were non-directionally cloned into pCRII-TopO(Invitrogen) following the Topo TA cloning protocol. 30-60 cell embryo material was provided by Dr. Richard Davis of City University of New York Graduate Center (redavis@postbox.csi.cuny.edu).

College of Staten Island, Staten Island, NY (redavis@postbox.csi.cuny.edu).

Putative full length read
The vector to vector length is 82
Seq primer: SL1 primer.

Genomic DNA isolated from a cloned population of Trypanosoma brucei (TREU927/4 GTTAt 10.1) was mechanically sheared to give a tight size distribution (4 kb). The v + i method used for the library construction is described in detail in Smith, H. and Venter, J.C. (Making small

GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
COMPETITE OF INVENTION: COMPETITOR PRIMER ASYMMETRIC
TITLE OF INVENTION: POLYMERASE CHAIN REACTION
NUMBER OF SEQUENCES:
COMPESSEE: US. ARMY
ADDRESSEE: US. ARMY
COMPESSEE: US. ARMY
ADDRESSEE: OFFICE OF THE CHER COUNSEL (AMSCB-GC)
CITY: ABERDEEN PROVING GROUND
STREET: OFFICE OF THE CHIEF COUNSEL (AMSCB-GC)
CITY: ABERDEEN PROVING GROUND
STATE: MARYLAND
COUNTRY: USA
ZIP: 21010-5423
COMPUTER: READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATENTIN Release #1.0, Version #1.25
CURRENT APPLICATION DATA:

DESCRIPTION: gamma-crystallin gene exon 3
DESCRIPTION: (Accession # K03006) nucleotides 9 to 30
HYPOTHETICAL: No
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DATE: 1985

Sequence 135, Application US/09270542

Patent No. 6322976

GENERAL INFORMATION:

APPLICANT: Aitman, Timothy

APPLICANT: Scott, James

TITLE OF INVENTION: Compositions and Methods of Disease Diagnosis and

TITLE OF INVENTION: Therapy

TITLE OF INVENTION: Therapy

FILE REPRENCE: 4198/78179

CURRENT FILING DATE: 1999-03-17

EARLIER APPLICATION NUMBER: 09/221,222

EARLIER PILING DATE: 1999-12-23

NUMBER OF SEQ ID NOS: 207

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 135

LENGTH: 30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 359, Application US/08961083
Patent No. 6159469
GENERAL INFORMATION:
APPLICANT: Choi et al.

Sequence 765, Application US/09671317

Patent NO. 6528260

GENERAL INFORMATION:
APPLICANT: Blumenfeld, Marta
APPLICANT: Chumakov, Ilya
APPLICANT: Chen, Annick
TITLE OF INVENTION: BIALLELIC MARKERS RELATED TO GENES INVOLVED IN DRUG METABOLISM
TITLE OF INVENTION BIALLELIC MARKERS RELATED TO GENES INVOLVED IN DRUG METABOLISM
TITLE REFERENCE: 62.U33.CIP
CURRENT FILING DATE: 2000-09-27
CURRENT PELING DATE: 2000-09-27
FRIOR APPLICATION NUMBER: US 60/136,269
FRIOR FILING DATE: 2000-03-24
FRIOR FILING DATE: 1999-03-25
FRIOR FILING DATE: 1999-03-25
FRIOR PILING DATE: 1999-04-30
NUMBER OF SEQ ID NOS: 977
SROW APPLICATION NUMBER: US 60/131,961

Sequence 2710, Application US/08585684B

Fatent No. S877021

GENERAL INFORMATION:

APPLICANT: Stinchcomb, Daniel T.

APPLICANT: Arguinces, Thale

APPLICANT: MCS-Niggen, James

TITLE OF INVENTION: METHOD AND REAGENT FOR THE

TITLE OF INVENTION: INDUCTION OF GRAFT TOLERANCE

TITLE OF INVENTION: AND REVERSAL OF IMMUNE RESPONSES

NUMBER OF SEQUENCES: 2751
                                                                                     RESULT 46

Patent No. 5362865

GENERAL INFORMATION:
TITLE OF INVENTION: Enhanced Expression in Plants Using
TITLE OF INVENTION: No. 5362865-translated Leader Sequences
TUTLE OF INVENTION: No. 5362865-translated Leader Sequences
NUMBER OF SEQUENCES: 22
CORRESPONDENCE ADDRESS:
ADDRESSEE: Janelle D. Strode, Monsanto Company, BB4F
STREET: 700 Chesterfield Parkway No. 5362865th
CITY: St. Louis
STATE: Missouri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      100.0%; Score 10; DB 4; Length 70; 100.0%; Pred. ; Sequence 6, Application US/08280263
; Patent No. 5659122.
; GENERAL INFORMATION:
; TITLE OF INVENTION: Enhanced Expression in Plants Using
TITLE OF INVENTION: No. 5659122-translated Leader Sequences
; VUMBER OF SEQUENCES: 22
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: Janelle D. Strode, Monsanto Company, BB4F
; STRET: 700 Chesterfield Parkway No. 5659122th
; STRATE: Missouri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S-08-117-374-19
Sequence 19, Application US/08117374
Sequence 19, Application US/08117374
Patent No. 5362865
GENERAL INFORMATION:
APPLICANT: Austin, Glenn D.
TITLE OF INVENTION: Enhanced Expression in Plants Using
TITLE OF INVENTION: No. 5362865-translated Leader Sequences
NUMBER OF SEQUENCES: 22
CORRESPONDENCE ADDRESS:
ADDRESSEE: Janelle D. Strode, Monsanto Company, BB4F
                           APPLICANT:
TITLE OF INVENTION: Enhanced Expression in Plants Using TITLE OF INVENTION: Non-translated Leader Sequences NUMBER OF SEQUENCES: 22
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: PROFILE PC-DOS/MS-DOS
SOFTWARE: PatentIN Release #1.0, Version #1.25 (EPO)
CURRENT APPLICATION DATA:
APPLICATION NUMBER: PCT/US94/10256
FILING DATE: 01-SEPT-1994
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                100.0%; Score 10; DB 5; Length 75; 100.0%; Pred. No. 1.8e+03;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 11, Application US/09599564A

Patent No. 6362318

GENERAL INFORMATION:
APPLICANT: KOMAN, Ahment
APPLICANT: CHASSIN, Dorine
APPLICANT: CHASSIN, Dorine
APPLICANT: BELLET, Dominique
TITLE OF INVENTION: NEW PROTEIN CALLED EPIL/PLACENTIN, PROCESS FOR THE
TITLE OF INVENTION: RORPOSITION OF THIS PROTEIN AND PHARMACEUTICAL
TITLE OF INVENTION: PROTEIN
TITLE OF INVENTION: PROTEIN
TITLE OF INVENTION: PROPERING
TITLE OF INVENTION OF PART 1200-05-23
CURRENT FILING DATE: 2000-06-23
PRIOR APPLICATION NUMBER: US 09/174,465
PRIOR APPLICATION NUMBER: US 08/482,842
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                         ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ·;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DOCATION: (1)..(93)
COTHER INFORMATION: Description of Unknown Organism:EPIL - Early
CHER INFORMATION: Placenta Insulin-Like peptide

Sequence 99, Application US/09016434
Patent No. 6500393
GENERAL INFORMATION:
APPLICANT: Janice Au-Young
APPLICANT: Jeffrey J. Seilhamer
TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF SIGNALING
TITLE OF INVENTION: PATHWAY GENE EXPRESSION
NUMBER OF SEQUENCES: 1490
CORRESPONDENCE ADDRESS:
CARRESPONDENCE ADDRESS:
STREET: 3174 PORTER DRIVE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

; Sequence 290, Application US/09827998
; Patent No. US30020102252A1
; GENERAL INFORMATION:
; APPLICANT: Gu, Yizhong
; APPLICANT: Shannon, Mark
; TILES OF INVENTION: NOVEL ISOFORMS OF HUMAN PREGNANCY-ASSOCIATED PROTEIN E
; FILER REFERENCE: MDIMORE-8
; CURRENT APPLICATION NUMBER: US/09/827,998
; CURRENT APPLICATION NUMBER: US 60/207,456
; PRIOR FILING DATE: 2000-05-26
; PRIOR FILING DATE: 2000-05-26
; PRIOR FILING DATE: 2000-09-27
; NUMBER OF SEQ ID NOS: 1881
; SOFTWARE: Acomica Sequence Listing Engine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GENERAL INFORMATION:

APPLICANT: GU, Yizhong

APPLICANT: GHANDON, MOVEL ISOFORMS OF HUMAN PREGNANCY-ASSOCIATED PROTEIN E

TITLE OF INVENTION: NOVEL 18/09/827,998

CURRENT APPLICATION NUMBER: US 60/207,456

PRIOR APPLICATION NUMBER: US 60/207,456

PRIOR APPLICATION NUMBER: US 60/236,359

PRIOR APPLICATION NUMBER: US 60/236,359

PRIOR PRILING DATE: 2000-09-27

NUMBER OF SEQ ID NOS: 1881

SOFTWARE ABOMICA SEQUENCE Listing Engine

SEQ ID NO 291

LENGTH: 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
